

Experiment 3: Building Corporate Risk Register & Risk Taxonomy

Aim

To build a structured corporate risk register and risk taxonomy in Eramba by defining risk categories, threats, vulnerabilities, and business risks.

Procedure

1. Navigate to Risk Management → Business Risks → Settings.
2. Create Risk Classification Types such as Risk Category, Likelihood, and Impact.
3. Add risk classifications under these types.
4. Review the available Threats and Vulnerabilities.
5. Configure the Risk Calculation Method using Likelihood and Impact.
6. Configure the Risk Appetite/Threshold matrix.
7. Create/import business risks under Risk Management → Business Risks.
8. Verify the completed risk register.

Output

A risk taxonomy containing classifications, threats, and vulnerabilities was established, and 10 business risks were added to the corporate risk register.
